

Team Involvement in Demonstration

Date	15 July 2026
Team ID	RW-2026-01
Project Name	Rising Waters – AI-Based Flood Prediction System
Maximum Marks	1 Mark

Team Involvement in Demonstration:

The successful demonstration of the **Rising Waters – AI-Based Flood Prediction System** was achieved through active participation and collaboration among all team members. Each member was assigned specific responsibilities based on their area of contribution, ensuring a smooth and well-organized presentation. The demonstration highlighted the technical implementation, machine learning model, database integration, and overall functionality of the system.

S.No	TeamMember Name	Role in Demo	Section Presented	Contribution Summary	Participation
1	D Hemanth Kumar	Team Leader & Project Presenter	Introduction, Problem Statement, Objectives	Introduced the project, explained the motivation, objectives, and coordinated the overall demonstration.	Active
2	V Vijay	Backend & Machine Learning Presenter	System Architecture, XGBoost Model, Technology Stack	Explained the Flask backend, XGBoost prediction model, dataset preprocessing, and project workflow.	Active
3	L Shivani	Frontend Demonstrator	User Interface & Live Prediction Demo	Demonstrated the web application, entered sample environmental data, and generated flood prediction results.	Active
4	P Karthik Sai	Database & Testing Presenter	MySQL Database, Testing Results, Future Scope	Presented database design, prediction history, testing outcomes, and discussed future enhancements.	Active

Team Coordination Notes:

Aspect	Details
Team Leader / Coordinator	D Hemanth Kumar
Overall Team Coordination Rating (1–5)	5 / 5
Any Issues During Demo	Minor delay occurred while loading the Flask application due to local server initialization.
How Issues Were Resolved	The application was restarted, database connectivity was verified, and the demonstration continued successfully without affecting the overall presentation.

Individual Contributions

D Hemanth Kumar

- Coordinated project activities and managed team responsibilities.
- Presented the project overview, objectives, and problem statement.
- Explained the significance of AI in flood prediction.

V Vijay

- Developed and explained the Flask backend architecture.
- Implemented the XGBoost machine learning model.
- Described data preprocessing and model training.

L Shivani

- Designed and demonstrated the user interface.
- Performed the live flood prediction demonstration.
- Explained the interaction between the frontend and backend.

P Karthik Sai

- Managed MySQL database integration and prediction history.
- Conducted testing and validation of system functionalities.
- Presented future enhancements and concluded the demonstration.

Demonstration Outcome:

The project demonstration was completed successfully with **100% participation** from all team members. Each member effectively presented their assigned module, demonstrating a clear understanding of the system and its implementation. The live demonstration of the **Rising Waters – AI-Based Flood Prediction System** showcased seamless integration between the Flask web application, XGBoost prediction model, and MySQL database. The presentation highlighted the project's ability to provide accurate flood risk predictions and reflected strong teamwork, effective communication, and coordinated execution.
